

Drinking Water Warning

Chilson and Eagle Lake Water Users (Town of Ticonderoga)

August 17, 2025

The Town of Ticonderoga has failed to provide proper treatment for *Cryptosporidium*.

What is Cryptosporidium? *Cryptosporidium* is a single-celled protozoan parasite commonly found in lakes and rivers, especially when the water is contaminated with sewage and animal waste. *Cryptosporidium* can cause gastrointestinal illness (e.g., diarrhea, vomiting, cramps).

Who is at risk? Infants, some elderly or immunocompromised persons such as those undergoing chemotherapy for cancer; those who have undergone organ transplants; those who are undergoing treatment with steroids; and people with HIV/AIDS or other immune system disorders who can be particularly at risk from infections. You should seek advice about drinking water from your physician or health care provider.

What are the symptoms? Symptoms may include profuse, watery diarrhea, abdominal cramps, vomiting, lethargy, and general malaise.

What should I do? **Do Not Give Water To Infants, Some Elderly Or Immunocompromised Persons Such As Those Undergoing Chemotherapy For Cancer; Those Who Have Undergone Organ Transplants; Those Who Are Undergoing Treatment With Steroids; And People With HIV/Aids Or Other Immune System Disorders Who Can Be Particularly At Risk From Infections.**

ANYONE AT RISK NOTED ABOVE SHOULD USE BOTTLED WATER OR BOILED WATER FOR THEIR DRINKING WATER AND FOOD PREPARATION PURPOSES.

What happened? What is being done? Pursuant to the Long Term 2 Enhanced Surface Water Treatment Rule ("LT2ESWTR"), on or before October 1, 2014, the Town of Ticonderoga was required to provide water treatment for the Gooseneck Reservoir source to inactivate *Cryptosporidium*. The Town of Ticonderoga has been engaged in a process to provide such treatment and/or provide an alternative source of water. As of October 1, 2014, that process has not been completed. The United States Environmental Protection Agency ("EPA") issued an order dated October 3, 2014 requiring the Town of Ticonderoga to meet these treatment requirements.

August 2025 Update: The Town continues the process of identifying lawful drinking water sources for the Chilson and Eagle Lake drinking water users. Sites have been identified, and the hydrogeologist is continuing its review of the sites. It is expected that test wells will be drilling in the coming months. The results will then form the basis for review and consideration by the Town Board and the public. While the current June 2025 deadline has not yet been formally extended in U.S. District Court, the Town has been advised by the EPA that the EPA will not pursue enforcement actions against the Town at this time given the Town's good faith efforts to pursue lawful and affordable drinking water alternatives. The Town Board continues its efforts to find good, safe and affordable sources of drinking water for the Chilson and Eagle Lake drinking water users.

Further information can be obtained by contacting the Town of Ticonderoga Water Department at 518-585-6144, or logging on to the Town of Ticonderoga webpage at: <http://www.townofticonderoga.org>

Please share this information with all the other people who drink this water, especially those who may not have received this notice directly (for example, people in apartments and businesses). You can do this by posting this notice in a public place or distributing copies by hand or mail.
